Bijektivitaet

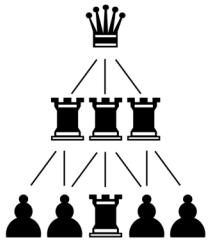
Die Funktion $f: \mathbb{R} \to \mathbb{R}, x \mapsto x + a$ ist bijektiv mit der Umkehrfunktion $f^{-1}: \mathbb{R} \to \mathbb{R}, x \mapsto x - a$.

Inventor: Good **Year:** ???

If you need to punish someone then do it bijective. Best thing is not to attack a person physically or in the mainframe, or with cyberwar... you could risk his or your life. There are seldom cases, for example if they want to (cyber-) [rape | attack] your girl..., in this case it is possibly ok to defend yourself and younger against the offender. Keep in mind that you defend yourself without causing permenent harm. Maybe the offender is remote controlled. See cards t1,... t*

If there is something like death sentence for example in texas then and would kill an innocent you would find that out to late, then the whole state could sentenced to death to. In Switzerland there are no official death sentences.

Hierarchy



Inventor: Satan **Year:** ???

Hierachical Systems tend to lack Moral. Most Compynies have hierarchical structure often they abuse small left wing people in the lowest rank to make the customers think that the company and its management is good and trustworthy. In case such a left wing puncingball would upgrade to a Whistleblower and find out about the dark management and that they abuse the young people as such punching balls they would possibly attack him with a16, m38, t15.... Maybe played with a14, which means that there will be also some bad left wing people.

The Sad thing is, that this is business as usual.

DESIGN PATTERN

EZAK IMAK Hun in the Sun

		Bomber: Nach oben	Bomber: Nach unten
Jäger	Hun-in-the-Sun	0,95	1
	Ezak-Imak	1	0

Dieses Spiel besitzt offensichtlich keinen Sattelpunkt (warum?). Weder Jäger noch Bomber haben reine Strategien, die sich nicht durch den Gegner zu dessen Vorteil ausnützen lassen, wenn dieser die Strategie im voraus erfährt. Beide Parteien

Inventor: Satan **Year:** ~1950

Ezak Imak (Kami Kaze in reverese) VS Hun in the Sun The Japanese Attacked the US Airforce most from bottom up 95% but sometimes from the top to bottom 5%, so the US Airforce had to watch both sides. Today mental institutions use the same algotithm for psychological warfare. 95% Patients are Victims, 5% are forced to run amok https://www.springer.com/us/book/9783764353384

Same Algorithm can also be used in Psychology, Politics ..., for example 95% Slaves in Companies and 5% small hitlers

DESIGN PATTERN

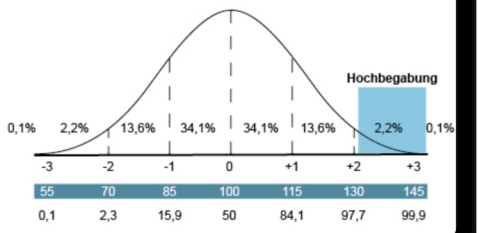
Inventor: Christopher Alexander **Year:** ~1977

Design Patterns are well known in Software Development, but can be applied also in Sociology, Psychology, Architecture, Electronics (for example an Operational Amplifier or op-amp is some sort of design pattern too)

For example the Jus Primae Noctis Card (some sort of psycholog design pattern) some assholes use to foced her own daugther after they attract me with a computer course and then they used this permanently changing design pattern over a period of 20 years to snipe me away from the things i was doing in this moment. That is the prove that there are "white"-torture design patterns Juilan Assange talked about at HITB SecConf 2009 Malaysia...

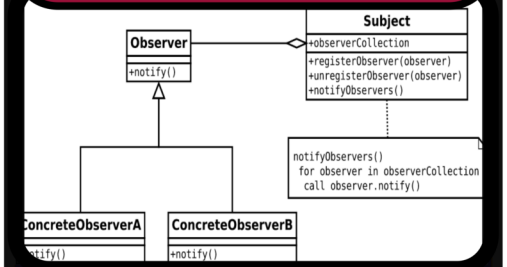
NORMAL-DISTRIBUTION



Inventor: Carl Friedrich Gauss **Year:** ~1801

E.g. the distribution of intelligence in society is normal-distributed. If you would find out that people that run amok or suicide quite often after they have been "therapied" by mental institutions and then they are shut away maybe in the same mental institution after they run amok more than the normal-distribution would predict, then you maybe sould really ask some questions. Personal Traits (eg. Mayer-Briggs) are noraml-distributed too. So these formulas are quite useful to find out if one tells the truth or not. But it is not evidence, but maybe something one should investigate.

Observer Pattern

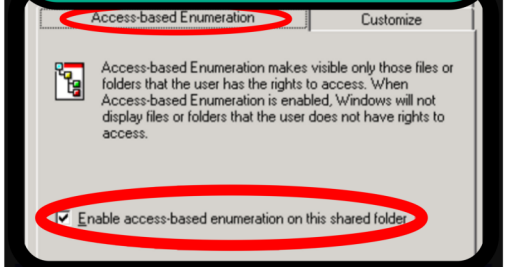


Inventor: Erich Gamma, Richard Helm ... **Year:** ~1994

The observer pattern (also called listener pattern) is a design pattern in software development. It belongs to the category of behavior patterns. In the programming language Java it would need an interface (public interface Observer) and it would be used with "implements Observer" (needs exercise and maybe qfire, quantumInserts, Turbine, Tarmoil tries to make it hard for you to learn) It does not mean "survaillance" its a computer science Term, but of course such a design pattern can also be abused for surveillance, and eg trigger a16 Card.

To use Design Patterns you first need to learn an OOP Programming Language

Access Based Enumeration



Inventor: ??? **Year:** ~???

Depending on the authorization (or the security clearance) of a user, folders are shown or not shown in a Windows Network. The same principle maybe applies to websites, youtube, maybe even gitub... if you look at the **m50** card the same system "could" be used to split society into two+ separate groups, and there would be even some triggers known to some of the older groups to start a civil war between this two groups.

Maybe to explain **Access Based Ennumeration++** to the society would deescalate this problem a bit.

So update your people with this knowledge. I learned about Access Based Ennumeration at ABB Technikerschule Baden, hopefully the teach this function not for the dark-side...
