towards_reasonably_trustworthy_x86_laptops

Maybe it was intentional that IBM sold the Operating System Market to Microsoft. They could have made a lot of profit. When I started to question what is going on I tried to find the things that caused me Problems in the Operating System. But maybe the Operatingsystem is just halfe of the Story

UDSL-FREQUENCIES

stsc11

Inventor: xxxxx
Year: ~???
Like the professor said: "I'm glad you asked. No matter how full your life may seem, there's always room for some beer" -- that means, if the agencies are only 5 Years ahead of the consumer-market, they can easily hide unseen Transport Streams in the higher frequencies, here BINS (xDSL) but also in DVB-x or in Dccsis (forget the **beer**, what did we just explain?)

playing unfair with world population that tries to find Satan on Layer 1 of the ISO-OSI Model, but maybe there are other channels, **see frequency table and who reserved / bought what frequencies...**

UDSL-FREQUENCIES

stsc13

Inventor: xxxxx
Year: ~???
Electronics Book for Kids, Verlag: Stuttgart Frech, 1977. Warning, if the kid bought or recieved this book in the age of 10 it would be very likely that someone else wants to use him as scapegoat, and maybe the father of this kid is just the second scapegoat.

But it is my bad, that i spied on equal aged girls in scout camp, it worked but poorly

UDSL-FREQUENCIES

Version 2.2 Revision: July 1998

TAPR

AX.25 would be the simplest way for digital communication over random frequencies. Expect that they have tons of such technologies. Never play Red Team, except you really really know what you are doing. **Just listening to transmissions** possibly causes less harm then eg portscanning. Worst case satan even abuses the lives of innocent kids to protect its systems against hacking attacks. **If you would kill a kid by a portscan then they own you because then you are a murderer!!!**

Tunnel / ESAKI Diode

es3

Inventor: Leo Esaki
Year: ~1957
A tunnel diode or Esaki diode is a type of semiconductor that is capable of very fast operation. Operates in microwave frequencies. quantum mechanical effect called tunneling.

Like an Electrone Tube, to create High Frequencies / Oscilators. One could maybe integrate his also in CPU's or other electronic components.

ANTENNA

$$\lambda/n$$

es4

Inventor: xxxxx
Year: ~???
Spatially, antenna forms can be distinguished by their radiation length in multiples or fractions of the wavelength λ (Greek letter lambda):

You can calculate the frequency of antennas. Maybe a golden wire in the body would have effects on nervous system or muscles. The only legitimate way to find out if this is true would be a selve-experiment and this would be risky and must be controlled by a doctor of medicine. People that abuse such technology would obfuscate their victims with medicine or illegal drugs and they give kids illegal drugs for making them fear the justice system and to cover up such illegal human experiments

Cavity magnetron

es2

Inventor: H. Gerdien
Year: ~1910
The cavity magnetron is a high-powered vacuum tube that generates microwaves using the interaction of a stream of electrons with a magnetic field while moving past a series of open metal cavities (cavity resonators). Electrons pass by the openings to these cavities and cause radio waves to oscillate within, similar to the way a guitar resonates sound from its sound box via the oscillation of its strings. see also t15 card

For Microwave Oven but unfortunately also for things like Active Denial Systems (Another Card)

Vacuum / Electron Tube

es1

Inventor: Frederick Guthrie
Year: ~1873
A vacuum tube or valve (Britain and some other regions), is a device that controls electric current between electrodes in an evacuated container. Vacuum tubes mostly rely on thermionic emission of electrons from a hot filament or a cathode heated by the filament. This type is called a thermionic tube or thermionic valve. Not all electronic circuit valves/electron tubes are vacuum tubes (evacuated); gas-filled tubes are similar devices containing a gas, typically at low pressure

As a Transistor today used for high frequency and high power amplifiers like radio stations
