Needle Array — t28
Year: ~???

zure 3: SEM of hollow micro-needles fabricated on a flexible...

Inventor: xxxxx

Elon Musk says "we dont have enough bandwith to the brain" but if you look at research like "micro needle array" then you would see, that one could create massive parralel interface to the brain. We guess the design of Elon Musk's interface is completely bad and that he even knows that. That what Elon Musk shows in his shows about the Neuralink would just be some sort of Neuronexus Product that he possibly did not even develop himself. It would be very likely that Elon has already such an implant and is now producing a low-tec interface that would act as honey pot. We will send this card to elon with the hashtag #Neuralink but we don't think that he will answer, maybe even filtered or he is beeing blackmailed by eg. the CIA....

Paedo Mental Operating System — mos2
Year: ????

mental operating System

Inventor: CIA / Fischer?

My definition of a Mental Operating System would be a almost coherent dogma room for lazy people. See mos3 card. Important persons like politicians, scientists, parents... would maybe get an invitation to (cyber-)rape a young girl or boy as soon as they become somehow relevant. All those of them that bites in forbidden fruit can then be blackmailed with persons that would know. "Maybe" NSA / CIA dataretention systems play a role there. It is very likely that if one eaten this forbidden fruit things like Suicide Death Bot would work better, would work better on the offender but also the victim. Even the stream was only a simulation, things like m32, m44 would happen, and the offender would get dt1 or m46, but most important is that mos2 card obfuscates technology cards t1, t10, t12, pedophilia is a trigger topic that deactivates critical thinking

fear detection — m57
Year: ~???

Inventor: xxxxx

with Neurosky MindWave you can read attenuation or meditation, so we guess one electrode (t1 card) would be sufficient to extrapolate for example also the parameter fear. And if they would show something like cAPI Card on eg. Facebook stream and would find out that the victim gets paranoid or fears that, they would loop such scenes until the victim tries to commit suicide or runs amok. So this card would be an important element for eg. co6, bo1 or a16 card. since the offender does not want to own or kill the victim, the group would feel good when the victim is revictimized, so the real ofender would play m37 card on the group for later using the dt1 card against the group, normally if you could prove that to the offender he says something like "it's just training", "we only want to hel" and a lot similar lies, so question if one of the ofender says "it's just training"

the speaker is lying — m55
(Stimulus-Reaction-Habit)
~1883

My nose grows now!

Inventor: Carlo Collod

With tons of bigdata you could easily say if someone is lying. Maybe there is already a system that does that function this to help parents to teach their children well. This would need some Algorithms and some Technology cards and of course some programming langauge like Prolog. After a while the parents would trust into this stimuli and if the oldes kid would say, the system is lying but the stimulus that was trained in the parents head says this is a lie, the system does not lie. the parents would not believe that the system is broken or that the system is intentionally lying. Maybe a common problem among WhiteHat Hackers. But it bacame easier since good people like Manning or Snowden provided us with proov. What if Schizophrenic People have the same Problem, or at least some of them. Workarund: switch from Inductive reasoning to Deductive reasoning

strapping psychiatric patients — m58
Year: ~???

Inventor: xxxxx

Mental Institution strapping psychiatric patients. I could verify that in 2007 when they strapped me in Mental Institution Königsfelden, Aargau, Schweiz. The good people in mental institutions they tell that it's just that the patient does not commit suicide. But in fact it is mindcontrol and toroture, see Sensory Deprivation. Worst case there are even shrinks that would rape strapped young female patients. If you google "Psycho-The-Rapist rapes patients" you would get 10'100'000 hits on google search. As we said on other cards, this normaly just obfuscates technology cards like t1, t28....

the sad fact is that if a patient (no matter if male or female) would have been raped in a mental institution he or she will try to commit suicide the rest of his / her life. We did not find a way to fix that behavior.

Suicide Death BOT — a16
Year: ~???

Inventor: xxxx

If a person can be controlled or at least influenced by some technology cards t* evil people unfortunately could create some sort of a suicide death bot, using things like m38 card for priming to make innocent people to commit suicide (attempts). We think that this is the major way eg. CIA kills people that know to much and the reason news are normally not telling the story from people that commited suicide (maybe they killed Ian Murdock with a suicide death bot). People with lower rank would be told that it's just training or BDSM. But in fact if the Whistleblower would die the whole group would be lost too and so controllable by eg. the CIA, wirst case m37 && dt1 card. Those groups that already have "trained" a kid to death would never confess. Forced to keep silent. Possibly the code of such suicide death bots would be packed into proprietary non-deterministic crypto both personalized or generic, eg. m38 would be generic.
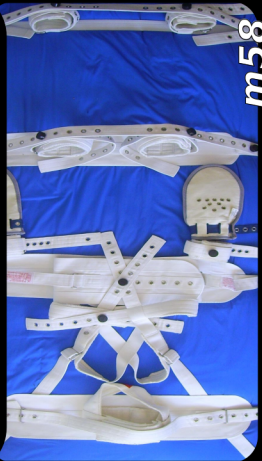

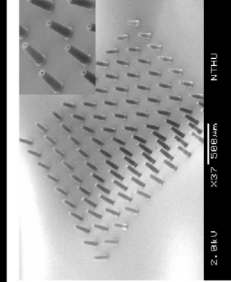

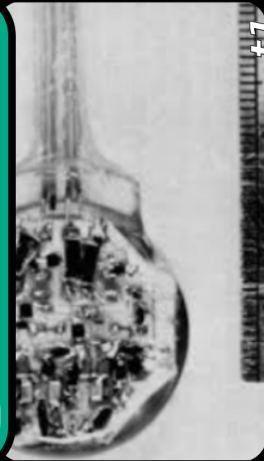

intimidation — m56
Year: ~???

Inventor: xxxxx

Often the offenders try to intimidate the victim(s). There are may ways they do that, with weapons (m21) with law (co4) with threads against the people i love, with poison (eventrigger on eg. the drink you just had and a loop: "You've just been poisoned, hahaha"), or they tell you "we will put you again in a mental institution where they force you to take drugs that even kill, eg Zyprexa. Often they additionally use the role toggler card (m42) and tell the victim, that he is intimidating the offenders to keep the victim confused. It is normal that they activate several hacks the victims computer... it's psychological warfare but i am careful because i know they killed Tobias Moser (m46 card) those who think i would like to blame pirate party, because of skull, in C++ there is something like operator overloading, one could do this with symbols too
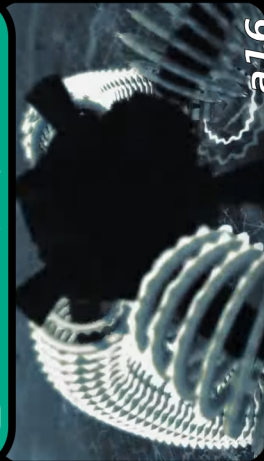

Stimoceiver — t1
~1950

Inventor: José Manuel Rodriguz Delgado ~1950

The newest versions (see Neuralink, Elon Musk, HoneyPot) read data (like EEG) and transmitting signals to the brain. Can activate certain functions in the brain, wires in the Amygdala would probably cause agressions (b1 card). You can find an active community (read only, and non-invasive) on Twitter: @OpenBCI maybe they try patch satans work. Things like directly "built-in" Augmented Reality (Like PokemonGO) could be achieved too with such technologies, see also Patent WO2005055579A1 (HoneyPot) or t12 Card. Can be used as lie detector (co2 card), read thoughts & emotions, influence emotions, automate & control victims (maybe with 3D GameEngine CryEngine / Unity, and possibly Google Maps 3D, OpenStreetMap?)
